

Road map for Tech area

(it depends on points of view, but a roadmap is more practical than theoretical: short, medium or long terms are constructs and involves both experiences and knowledge, so let's take it easy and keep hacking)

All goals below were set up on December 2017:

- **Short time goals**
 1. A wiki page with all our projects (upgrading the page started last year)
 2. upgrade roadmap with regular reports (not sure if roadmap refers to tech roadmap or what :)
 3. A communication campaign to ask for needs (doing, started in early 2019 and taking care of all users :)
- **Medium time Goals**
 1. Open project to more than one maintainer for all projects (well, have a maintainer would be a big achievement, after this first step, we'll go for the team)
 2. Work exclusively with issues tracker (gradually doing it, but it's mandatory having a maintainer following a tracker, isn't it?)
- That below, supposed to be the long term goal is being implemented right now
 1. Projects resilient with a **decentralised server system** ; a further few steps need to be taken and actually different services are already distributed last bit to be carried out is the main FairCoop server functions and relative roles.
