

# In-progress dev projects

We are all moved by hacker's ethic (indeed, one of the FairCoop principle) as well as we all strongly believe in open source accordingly. Beyond a personal choice of most of the people involved in Tech area, that was an agreement we discussed and approved in Assemblies and therefore we strictly follow a few basic patterns. Consequently, the ideal development takes place in git, where code can be shared allowing full collaboration within the community, with the source open to anyone to take advantage mutually of development. NB the following is not completed list:

- [Tech area Gitlab on Fairkom](#)
- [FairCoin Github](#)
- [valuenetwork | OCP in Github](#)
- [FreedomCoop in github](#)
- [Frontend UFCA](#)

Anyone is welcome to add up his/her own project and repo.

## Tech Area

The tech area oversees various projects, amongst them Fair.Coop website and sysadmins task. Each one of the projects was classified following [this form](#):

[Blog Fair Coop](#) obsolete

[Calendar](#) (unmaintained)

[Fair.coop Main Website](#) (encosianima, Chris & Moki, basic maintaining)

[Fairlogin](#) (fairkom)

[Fairmarket](#) (Santi, Cuba crew?)

[Forum Fair Coop](#) (unmaintained)

[OCP/OCE Development](#) (bumbum)

[Use Fair Coin](#) (Rama)

[Kispagi](#) (unmaintained)

[Invoices for FreedomCoop](#)

[Stats tool for Faircoop](#) (piwik I'd say unmaintained)

[Wallet](#) (well, it never existed)

[Wiki](#) ( encosianima, Chris & Moki, basic maintaining)
