

# ODOO

Odoo is a free software designed to be a free version of ERP (enterprise resource planning), specific software *made up of an integrated suite of business modules, including customer relationship management (CRM), e-commerce, accounting, billing, inventory management, project management, warehouse management, financial management, manufacturing and purchasing*. Born as tinyERP, then called openERP and now ODOO, the current version is 12, with maintains the 8 giving as a dirty previous.

It is mature software and competes with the great business and consequently requires lots of customization to suit each environment.

## Requirements:

- VPS complete
- PostgreSQL
- Linux
- python

## Comparisons with similar:

- Pros:
  - Modular.
  - Clean code.

  - Many plugins are paid and not free.
  - Little documentation.

## Rating:[4/9]

- LAST UPDATE: V10 -> 06 Nov 17
- LAST UPDATE: V09 -> 02 Nov 17
- LAST UPDATE: V08 -> 27 Set 17
- PLUGINS/MODULES: YES
- DECENTRALIZED: NO (only on server)
- DISTRIBUTED: NO
- CONSUMPTION: High consumption of resources

- KISS: NO, too much features mixed.
- DOCUMENTATION: YES
- 4 FREEDOMS FS: YES LGPLv3
- CONTROL VERSION: YES

## Used in FairCOOP in:

- [market.fair.coop](https://market.fair.coop)

## How we use it:

- @santidd maintains some of the modules developed - <https://github.com/Punto0/>
- recently migrated to a brand new server with Debian stretch environment, next step will be to upgrade to 10 or 12 ODOO.
