

Wekan

Its a software for using kanban techniques in the project manager issues

Wekan allows to create Boards, on which Cards can be moved around between a number of Columns.

Requirements

- Node.js
- MongoDB

Comparisons with similar

- Pros:
 - Like Trello.
 - Public and private.
 - Markdown edit
 - Drag and Drop images.
- Cont:
 - No Graphics
 - No calendar view.
 - No use of templates.
 - Without support even with Kispagi

Rating[6/9]

- LAST UPDATE: -

[andstorm/libreboard](#) ## How we use it

- Currently, there is No methodology maintenance and development.
- Not if we have to use it but if not you'd have to check all the pending tasks and arrange them if necessary in the place that we decide.
