

# Wordpress

Wordpress is a content management system (CMS) that began its development in 2003 is currently at version 4.8. It is the most widely used software for blogs and websites based on free software

We can consider it a software mature a bit more unstructured than Drupal but with more people involved, and also something more focused on getting business.

## Requirements:

1. Mysql server
2. Apache or Ngix Server
3. Linux
4. php

## Comparisons with similar:

1. Pros:
  1. Easy installation
  2. Automatic updates
  3. Thousands of plugins.
  4. Great documentation.
  5. Easier to webadmin not experts. (auto update)
  6. Most programmers know what it is.
  7. Text editors wyswyg
  8. Auto-save timing of the article as a draft
1. Cont:
  1. Most of the plug-in are the of payment and/or non-free software.
  2. All content types are equal.
  3. More difficult for security.
  4. php is out of fashion.
  5. More maintenance.

## Rating: [6/9]

1. LAST UPDATE: 21 June 17
2. PLUGINS/MODULES: YES
3. DESCENTRALIZED: NO (only on server)
4. DISTRIBUTED: NO
5. CONSUMPTION:
6. KISS: YES
7. DOCUMENTATION: YES <https://wordpress.org/about/>
8. 4 FREEDOMS FS: YES GPL2.0
9. CONTROL VERSION: YES <https://core.trac.wordpress.org/>

23. [retorn.net](http://retorn.net)

- How we use it:

1. Currently, there is No methodology maintenance and development.
2. A proposal would be that the WP needed and agreed to fair.coop are multisite with the commission Tech support themes and modules to use. The rest who try to meet their needs and monitor that they are not outdated, nor vulnerable to, but the work should be done by them or you ask us to do so.
