

Why did you choose blockchain as technology

FairCoin is the first blockchain with a human touch and clear values in mind. While some may consider this a contradiction to the paradigm of trustlessness in blockchain technology, we think it is an advantage, as we do not need to force users to upgrade the software, if some minor technical parameters need to be adjusted. Using a database like Cyclos instead was not an option, as it has one single point of failure, whereas FairCoin uses a distributed verification mechanism and works also without chain admins.
